## **DETAILED ACTION**

### ***Election/Restrictions***

Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 3 and 4, directed to the species of Group II no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

The information disclosure statement (IDS) filed 9/8/2003 is being considered by the examiner.

### ***Allowable Subject Matter***

Claims 1-4 are allowed.

The following is an examiner's statement of reasons for allowance: US patent 6722993, Tabuchi et al discloses a power transmission system for transmitting torque from a driving unit to a driven unit, the system comprising: a first rotating member rotated by the driving unit; a second rotating member connected to the driven unit; a torque limiter that transmits torque from the first rotating member to the second rotating

Art Unit: 3679

member, wherein the torque limiter is partially broken to interrupt transmitting the torque when the torque transmitted to the driven unit exceeds a predetermined value; a damper that is formed of an elastically deformable member and disposed in a passage through which the torque between the first and the second rotating members is transmitted; and a cover that is hooked to be fixed with at least one of the first and the second rotating members to inhibit the damper from being displaced in a rotation axis direction of the first rotating member, wherein the cover includes a first-step protruding portion, wherein by using the first-step protruding portion the first-step protruding cover is hooked in a first state. Prior art of record does not disclose a second-step protruding portion hooked in a second state, wherein a clearance between the cover and the damper in the first state is narrower than a clearance between the cover and the damper in the second state.

The Examiner recognizes that references cannot be arbitrarily combined and that there must be some reason why one skilled in the art would be motivated to make a proposed combination of primary and secondary references.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure because it illustrates the inventive concept of the invention.
